SQL → SQL | BASIC

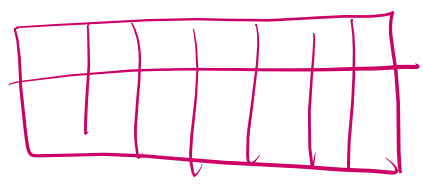
1] What is SQL?

↳ Structured Query Language

Data (size)

- (KB-MB) → (Excel) → local system
- (GB) → Excel X → S/W → MySQL
- TB/PB/YB/ZB → data warehouse

S/W → data store → rows, columns



→ Schemas → DB → DB is a collection of data stored in tables.

think like → Excel File

Think like Excel

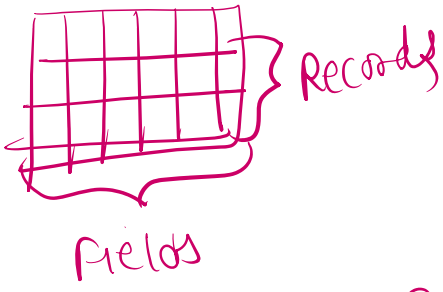
database → Excel File

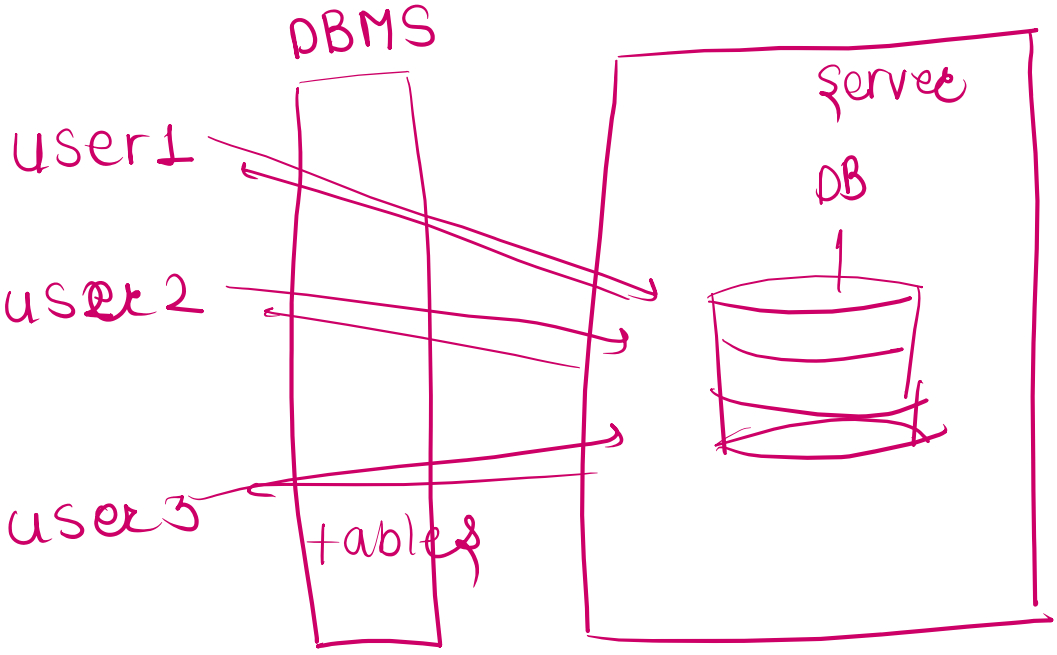
Tables → Sheets

Records → Rows

Fields → Columns

table





user → database

language

↳ SQL

→ store data

→ data retrieve

→ update data

→ data relation

→ update/delete data

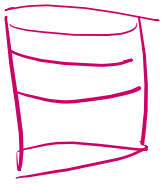
→ Manage database

User1 —communicate→ User2

lang

Mar | Eng | Hindi

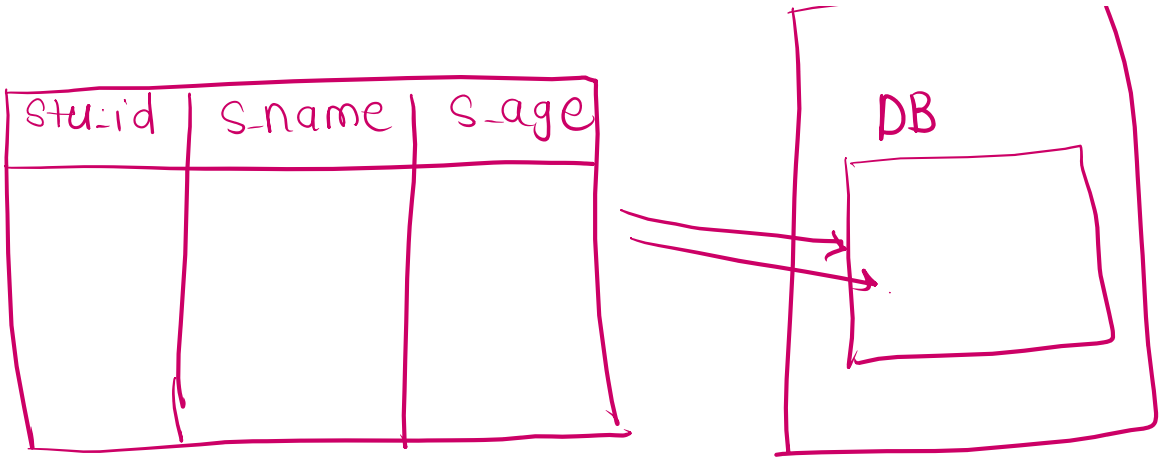
User1 ⇄ communication → SQL



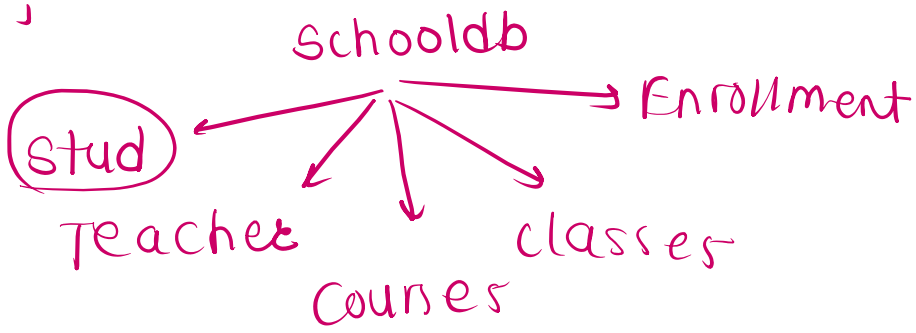
Commands in SQL

- **DDL**
  - CREATE
  - ALTER
  - TRUNCATE
  - DROP
- **DML**
  - INSERT
  - UPDATE
  - DELETE
- **DCL**
  - GRANT
  - REVOKE
  - User
  - Local
- **DQL**
  - SELECT
- **TCL** → ACID properties
  - Savepoint
  - Rollback
  - Commit
  - Automicity
  - Consistency
  - Isolation
  - Durability

① How Create table in SQL?



```
create database Schooldb;
use Schooldb;
```



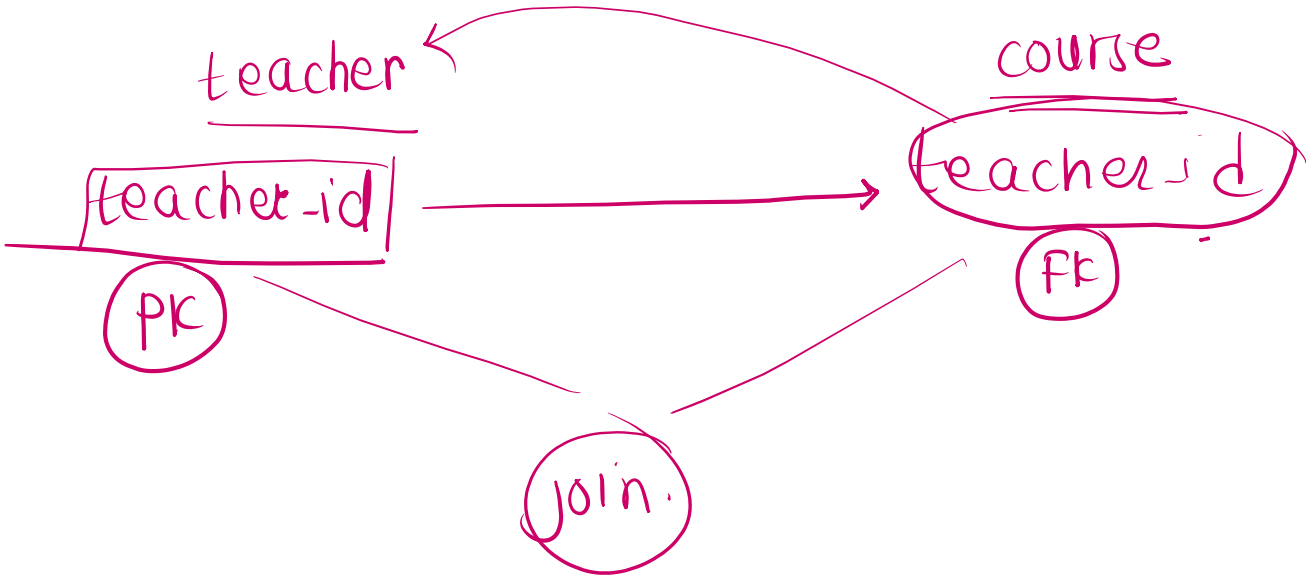
cre

Student table

```
CREATE TABLE STUDENT(
    s_id int primary key,
    name varchar(50) not null,
    age int,
    gender varchar(10),
    city varchar(50).
);
```

not null

unique



teacher
teacher-id
PK
course
teacher-id
FK
join.
